

# ACCESS CONTROL

Physical and Technical Access/Egress Control is used to restrict and control access to a site, property or specific area. Systems can provide visibility and awareness through associated CCTV or through integrated sensors and cameras. Access Control is a critical element of a good security plan in both commercial and residential environments.

## CAPABILITY OVERVIEW

Westacre provides a global access control capability, based around the core capabilities listed below. Whether part of a solutions package, or a single requirement, we liaise closely with each client to provide a truly bespoke service.

### Physical Access Control

- ◆ Vehicle and pedestrian gates
- ◆ Barriers, chains and bollards
- ◆ Perimeter boundary measures
- ◆ Secure/ballistic doors and windows
- ◆ Anti-climb measures
- ◆ Locks, deadbolts and reinforcements
- ◆ Panic rooms, safes and restricted waste solutions

### Technical Access Control

- ◆ Intercoms and video doorbells
- ◆ PIN code, proximity and timed access
- ◆ Biometric access - fingerprints, retina, facial, voice
- ◆ Two-factor authentication
- ◆ Duress systems with silent alarms
- ◆ Remote access via smartphone or PC
- ◆ Multi user permissions
- ◆ Smart home integration
- ◆ Qualified Electricians
- ◆ Existing system upgrades and repair
- ◆ Maintenance and testing
- ◆ Fully wireless systems
- ◆ CCTV system integration
- ◆ Alarm integration
- ◆ Computer access control and password management systems

The ability to control who has access is a great way to enhance your security and protect your assets.

**Having good physical barriers** around your property perimeter makes it easier to control a site and harder for people to gain unauthorised access.

**Good access control measures act as a deterrent** for anyone who may be planning to target your property.

**Access control systems are a good way of auditing** and verifying who has accessed a site or an area and when. Smart systems can send alerts to managers when staff enter or leave as well as allowing them to permanently withdraw access for a person.

**Video doorbells are a great way to check and speak to the person at your door.** Whether it be a parcel delivery driver or a family member, you can let them know you are out or even in the bath! Often criminals will ring your doorbell to 'check' if anyone is home. A smart video doorbell allows you to view and speak to that person via your smartphone.
